Summary

Senior at Colorado State University finishing a Bachelor's degree in Computer Science with a focus on Networks and Security. Currently employed as an IT Security Compliance Intern, with hands-on experience in compliance frameworks including NIST 800-171/53. Skilled in using SIEM and XDR/EDR tools for threat detection and incident response. Previous experience as an IT Support Technician, specializing in Windows imaging, troubleshooting, and system maintenance. Strong problem-solving skills, a keen understanding of cybersecurity principles, and a passion for computers as a whole.

Experience

Woodward, Inc. — **May 2024 - Present**
Security & Compliance Intern — Fort Collins, CO

- Documented policies and procedures for vendor risk management workflows.
- Completed POC of XDR solution. Identified valuable log sources, relevant data sources, relevant alerts, and dashboarding. Compared results of POC to current SIEM product.
- Performed POC of an AI based compliance tool, rejected the tool due to poor performance and negative outcomes.
- Managed IT security service requests through a ticketing system, including Third Party Risk Management (TPRM) software requests, became familiar with SOC2, ISO-27001, Penetration Test reports and more.

Colorado State University IT — **May 2023 - May 2024**
IT Support Technician — Fort Collins, CO

- Implement new cloud-based ticketing system improving ticket wait times by up to 15%
- Optimized computer imaging processes further accelerating deployment processes and minimizing setup times
- Resolved complex technical issues related to Windows to ensure high availability and uptime for university systems,
- Fostered effective cross-department communication, promoting collaboration and improving problem-solving across teams

Education

Colorado State University — **August 2020 - December 2024**
Computer Science — Bachelor's of Science

Key Courses:

- Systems Security
- Modern Cybersecurity
- Networks and the Internet
- Operating Systems
- Algorithms & Data Structures

Projects

Network & Server Homelab

- Set up multiple servers using virtual machines on a Type 1 Hypervisor, VM's including Windows Server 2022, RHEL, Ubuntu Server, and Kali Linux.
- Implemented security tools and monitoring with an open-sourced SIEM tool, a behavior-detection tool and zero-trust network access.
- Performed network configuration with custom firewall rules, self-hosted DNS, and network segregation using VLANs.

Machine Learning Malware Application

- Achieved high accuracy in malware detection by combining the strengths of Random Forest and Neural Network models using PyTorch.
- Demonstrated the ability to handle and preprocess large datasets efficiently.
- Showcased experience in identifying malicious software and files.
